What is HERO Hybrid Grass?

The partnership between Polytan (owned by Sport Group) and HG Turf Group provides customers who prefer natural grass with revolutionary surface technology.

From the top, it appears to be natural grass, but from below there are synthetic fibres anchored to an open grid. This unique knitted construction holds the playing surface together, protecting the natural grass and allowing it to thrive and perform. The result is a hybrid pitch that delivers unmatched stability, safety and consistency.

HERO Hybrid Grass is installed at the following Women's World Cup Stadiums

- Stadium Australia
- Perth Rectangular Stadium
- Melbourne Rectangular Stadium
- Eden Park
- Wellington Stadium

HERO Hybrid Grass

The perfect balance between natural grass and German fibre technology for outstanding performance.

Better for...

- Pitch durability and recovery
- Surface stability and player safety
- Maintaining perfect playing conditions
- Creating World Cup performances

**PITCHES MADE BETTER BY
SCIENCE + NATURE.**
